***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 107-190 are drawn to a method of inducing direct somatic embryogenesis cells in monocots without intervening callus stage, culturing the somatic embryogenesis cells to plantlets through different culture medium, classified in class 435, subclass 431, for example.

II. Claims 191-207 are drawn to inducing somatic embryogenesis in monocotyledonous callus cells, suspension cells, or microspore derived embryos and regenerating the cells into plants through different culture medium, classified in class 435, subclass 430.1, for example.

The inventions are distinct, each from the other because:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because the processes of Groups I and II have different starting materials and different method steps. Group I does not involve any callus while Group II does.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 1661

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
